# PubMed Filters

The screenshot shows the PubMed website interface. At the top, the browser address bar displays the URL: `hinari-gw.who.int/whalecomwww.ncbi.nlm.nih.gov/whalecom0/sites/entrez?myncbishare=hinari_wh`. Below the address bar, the NCBI logo and navigation links are visible. The main search area features a search box containing the text "HIV AND pregnancy" and a dropdown menu with "Advanced" selected. A red box highlights the search box and the "Advanced" option. To the right of the search box is a "Search" button and a "Help" button, also highlighted with a red box. A red arrow points from the "Advanced" option to a text box at the bottom of the page. The text box contains the following text: "From the initial (HINARI) PubMed page, we will run the *HIV and pregnancy* search and then apply various Filters. Note the to *Advanced search* and *Help* options." Below the search area, the main content area is divided into three columns: "Using PubMed", "PubMed Tools", and "More Resources". The "Using PubMed" column includes links for "PubMed Quick Start Guide", "Full Text Articles", "PubMed FAQs", "PubMed Tutorials", and "New and Noteworthy". The "PubMed Tools" column includes links for "PubMed Mobile" and "Single Citation Matcher". The "More Resources" column includes links for "MeSH Database" and "Journals in NCBI Databases". At the bottom of the page, there is a breadcrumb trail: "You are here: NCBI > Literature > PubMed" and a "Write to the Help Desk" link. The footer contains navigation links for "GETTING STARTED", "RESOURCES", "POPULAR", "FEATURED", and "NCBI INFORMATION".

[Clin Biochem](#), 2012 May 8. [Epub ahead of print]

1. **Fracture Risk Assessment.**

[McCloskey E](#), [Johansson H](#), [Oden A](#), [Kanis JA](#).

WHO Collaborating Centre for Metabolic Bone Diseases, University of Sheffield, Sheffield UK; Academic Unit of Bone Metabolism, University of Sheffield and NIHR Musculoskeletal Biomedical Research Unit, Sheffield Teaching Hospitals NHS Trust, Sheffield, UK.

**Abstract**

Having traditionally relied on measurements of bone mineral density, it is now established that the consideration of other risk variables improves the categorisation of fracture risk. Whereas several models are available, the FRAX models are the most extensively used. The approach uses easily obtained clinical risk factors, with or without femoral neck bone mineral density, to construct and validate fracture risk models in the real world, including centres from North America. These models should not be considered as a gold standard, but rather as a tool to build as new validated risk indicators become available. They provide an aid to enhance patient assessment and/or in combination with BMD.

# Reminder

- While working with Filters, you probably noticed the line that **Text availability** Filter that has the **Abstract, Free full text, Full text available** options. By clicking on these options, you would filter your search to include all articles with abstracts or full text articles or those articles that are available as free full text by various publishers or those citations that have abstracts.
- Note: if you click only on **Free full text** and NOT **Full text**, your HINARI tab will be limited to only articles that are both free full text and HINARI – a significantly less #.

# Advanced Search

The screenshot shows the PubMed website interface. At the top, there is a navigation bar with 'NCBI Resources' and 'How To' dropdown menus. Below this is the 'PubMed.gov' logo and the text 'US National Library of Medicine National Institutes of Health'. A search bar is present with a dropdown menu set to 'PubMed' and a 'Search' button. Below the search bar, there are two options: 'Limits' and 'Advanced'. The 'Advanced' option is highlighted with a red rectangular box.

## PubMed

PubMed comprises more than 21 million citations for biomedical literature from MEDLINE, life science journals, and online books. Citations may include links to full-text content from PubMed Central and publisher web sites.

### Using PubMed

## Search Clinic: Building a PubMed® Search

A thirty minute online search clinic presentation covered the mechanics of

[View the clinic recording](#)

[Evaluate the clinic](#)

### Questions and Answers

**1. The speaker mentioned that it is preferable to use a Text Word [tw] search over a Title/Abstract [tiab] search in many cases because Text Word includes the subject fields of the records. But aren't the records retrieved by a [tiab] search more likely to be relevant?**

Authors and searchers often use different vocabulary to describe the same concept. So, there is always a chance that you will miss highly relevant citations by searching only with [tiab]. For example, as of this writing, a search of: **quality of life [majr]** **NOT quality of life [tiab]** reveals over six thousand citations for English language articles where quality of life was deemed a major topic of the article by the indexer, but the term, quality of life, was not in the title or abstract. If you're not specifying a MeSH term, always try searching a term without a search tag or with the search tag, [tw].

**2. In using the Search Builder on the Advanced Search page, if you put the AND statement before the OR, could you just manually change the parentheses in the search box and then click Search?**

Yes. If you feel comfortable with using parentheses, add your search terms to the search box using the Search Builder, then change the parentheses and/or correct Boolean operators in the search box before clicking Search.

**3. With Automatic Term Mapping: Are all mapped MeSH terms exploded?**

Yes. When you enter terms in the search box without search tags or when the [All Fields] tag is used, any terms that are mapped to MeSH (see your Search Details) are exploded. In other words, terms mapped to MeSH retrieve any narrower (indented) terms. See the [MeSH Database](#) for details on any particular term.

**4. Are searchable fields distinguishable from non-searchable fields in the database listing (index)?**

For further information and training on **Advanced Search**, go to the PubMed **Search Clinic: Building a PubMed Search**
